

Experience

Frontend Engineer at Oblivious, Bangalore, India, June 2024 – present

- Delivered a dynamic, node-based visual editor using React Flow for managing complex multi-table database schemas, featuring interactive management of entity relationships, real-time metadata editing and instant validation feedback.
- Migrated a React.js codebase to Next.js, boosting the performance score from 49 to 98 and improving load efficiency.
 - Implemented Server-Side Rendering, improved SEO, cut load times by over 85% (FCP: 1.3s to 0.3s, LCP: 2.9s to 0.4s).
 - Integrated middleware for server-side authentication and role-based access control (RBAC), enhancing security.
- Wrote unit tests with Jest to validate UI components rendering and state management.
- Took ownership of the WebdriverIO-based QA process for a core project, independently managing the automated regression test suite framework and increasing test coverage.
- Contributed in development of Jekyll-based [Differential Privacy Registry](#) for OpenDP and Harvard University.

Web Developer at Walfin Tech Private Limited, Bangalore, India, July 2022 – March 2024

- Rendernet - online tool to generate images using generative AI - React | Redux | WebSockets.
 - Primary web developer responsible for independently delivering multiple key features.
 - Single-handedly developed feature to enable concurrent real-time interactions within the app via WebSockets, resulting in a 40% increase in user engagement.
- ToadCash - a mobile app that enables payments with crypto - Flutter.
 - Contributed to the development of a mobile app built with Flutter.
- RoverX - blockchain analytics web app - React | Redux
 - Led the development of a feature to render large data sets in the UI using a tabular format.
 - Improved app performance by 30% by reducing response times and optimising the number of re-renders. Achieved this by identifying and eliminating bottlenecks, minimising code redundancy, implementing memoized selectors with the Reselect library, and leveraging concepts such as memoization, lazy loading, and efficient list key management.
 - Added support for up to 200 dynamic filters and generating shareable links with filters applied.

Frontend Engineer Intern at Edvora, Starwisp Industries, India, Jan 2021 – June 2021

- Contributed in development of 7 React JS projects. Collaborated on designing mockups and wireframes, developing fully responsive websites for seamless cross-browser and multi-platform compatibility on desktop and mobile devices.

Full Stack Intern at PanaLabs, India, Dec 2019 – Dec 2020

- Developed full-stack application with React JS and AWS.
- Features include Google Maps component & location tracking based on IP address & GPS to show nearby businesses.
- Build a Google calendar like 2D timeline view to book appointments, user signup & sign-in via SMS OTP, autocompletion and notification features.

Projects

[Ancient Bristlecone Pine Forest](#), Web App - HTML | CSS | JS.

[An experiment with 3D transitions](#), Web App - React JS

Education

B. Tech, CSE, **NIT Manipur**, 2017 – 21, **8.9 CGPA**

[CBSE](#), SPS Bhopal, 12th: 89.4%, 10th: **9.0 CGPA**

Technical skill set

Next.js | React.js | Redux | TypeScript | Javascript | HTML | SCSS | CSS | TailwindCSS | Git | Jest | Static Site Generators (Jekyll, Docusaurus)
